

## Brain Liquefying Bacteria (BLB)

**Introduction:** A very nasty strain of bacteria causes your brain to liquefy, and has been discovered on among a population of LTHS students. This disease is easily spread by casual contact, and there is no known cure.

**Purpose:**

1. To understand how diseases spread in a population
2. To see if you have contracted the disease
3. To identify who was the originator of this horrible disease.

**Data Table:**

	Contact's Name
<b>1st Contact</b>	
<b>2nd Contact</b>	
<b>3rd Contact</b>	

**Conclusion:**

1. Do you have the disease?
2. Who was the originator of the disease?
